IRIS Hiremate – Effective Hire Management

IRIS Hiremate integrates fully with your IRIS Exchequer accounting and finance system to provide a feature-rich, yet simple to use, hire management system.

Powerful integrated hire management & accounting solution

IRIS Hiremate is a comprehensive hire management solution used internationally by businesses operating in the hire/rental of plant and equipment.

IRIS Hiremate makes running your hire or rental business simple. It's robust, reliable, user-friendly design makes it ideal for companies looking to fully track their assets or hired-in equipment, manage stock control, as well as produce documents, contracts and management reports – all from a single system.

It can be fully integrated with your existing IRIS Exchequer system to provide you with one single solution for all your hire and accounting needs. It is also modular in design, so you need only purchase those functions that suit your current business needs and budget. And as your business grows, IRIS Hiremate will grow with you.

Suitable for all types of business, including:

- Plant and tool hire
- Powered access
- Radios, communications and AV equipment rental
- Portable accommodation
- Vehicles and scaffolding
- Construction
- Generator and pump hire
- Lifting gear

Key benefits

- **Manage all aspects of your hire operation from one system** – from hires, sales and assets, to repairs and invoicing
- **Improved customer satisfaction** – deliver a more responsive, flexible service and build customer loyalty
- **Efficient asset management** – access full historical tracking information of equipment
- **Improved stock control** – improve utilisation of expensive assets
- **Excellent ROI** – keep costly assets in circulation
- **Increased profitability** – reduce costs and improve productivity
- **Unprecedented insight** – gain real-time visibility and control over your operation

Comprehensive asset management

IRIS Hiremate is a flexible hire management system with full asset management, multi-depot stock control, contract hire, and invoicing as standard. It allows users to simultaneously perform multiple tasks such as contract creation, customer enquiry, stock level and price enquiries.

It holds details of all main assets, hire accessories, stock and consumables, service items and x-hires available for sale and/or hire. Multi-depot stock and accessory items allow users to monitor stock levels independently at each depot from one single screen.

IRIS Hiremate also maintains details of every contract created with full history recorded for any length of time. Suppliers can be viewed and purchase orders placed, either for stock or non-stock items. Multi-depot issues and requisitions can also be processed, updating levels and retrieving current pricing immediately.

Individual or groups of customers can also be created with their own discount or pricing structures, allowing for quick creation of correctly priced contracts without reference to manual lists.

Fully integrated with IRIS Exchequer

IRIS Hiremate fully integrates with your IRIS Exchequer accounting system, giving you even greater levels of reporting and analysis than ever before.

There is no need to manually re-key data. Hire and sales invoices, complete with analysis and ÔUV breakdowns, will automatically update your sales ledgers. Updated account balances and 'On Stop' indicators will also be displayed when contracts are created.

Links to your IRIS Exchequer accounting system allow new customers to be created in either Hiremate or Exchequer, and transferred back and forth. Credit, cash and delivery address accounts can all be processed within Hiremate.

Key documents can be created and automatically sent at certain trigger points, such as purchase notes, hire notes, delivery notes and order confirmations. Business alerts can also be set up, so if a stock level drops too low, a credit limit is exceeded, a collection is overdue or even a service is due on an item of equipment, Hiremate will let the right people know at the right time.

Powerful reporting & business intelligence

IRIS Hiremate's reporting functions provide management with comprehensive and valuable information, enabling you to monitor costs, performance and efficiency levels throughout your hire operation.

A wide range of standard reports are available including Equipment Status list, Asset Register, Profitability and Maintenance Planner.

Depreciation, profitability and usage are all monitored and recorded for each asset. Scheduled maintenance for each main asset is a standard feature of the system with enhanced functionality available via the Test Certificate and Workshop modules.

Key features

- Asset management
- Customer maintenance
- Contract maintenance
- History
- Invoicing
- Extensive reports
- Report Writer
- Single Depot or Multi-Depot
- Email integration

Optional modules
